Online Shopping System:-

These are the online software where customers used to buy products of their wish. Developers or admin has account to add products to the database. This makes it reliable to order items.

This system ^{will be used by} ~~is~~ 3 people, Admin, Customer, Web User.

* Admin:- These are the people who adds products to the database so that user can purchase with valid details and credentials. They can add product of any category, nested within category. They even help user orders to be shipped in less days.

* Customer:- These are the users who used to buy products from particular category. These users are authenticated with other means. Only users ~~to~~ those who are authenticated with valid credentials and details will be able to place order. There are many modes of payment where people can pay. They can track the order and make cancellation with valid reason.

* Web User:- These are the user who just uses website to view products, compare products, check if product are available, compare price etc.
