Stock Maintenance

Stock maintenance is an interface b/w the customer and the sales person. It aims at improving the efficiency in maintaining the stocks.

The entire process of stock maintenance is done in a manual manner considering the fact that the number of customers for purchase is increasing every year, a maintenance system is essential to meet the demand.

The system will be used by 3 people:

- Market Data Provider
- Customer
- Sales person

- Market Data Provider is the one who analyze the product and distribute the news.
- Customer is the one who takes order of product
- Sales person is the one who maintains the stock details.

It includes two sections

Overall descriptions

→ It will describe major role of the system components and interconnections.

Specific Requirements

→ It will describe roles & functions of the actors
